Fever Detection

Control your environment with digital health protection and instant alerts.

**FeverCam**
Uses facial recognition to send automatic, real-time alerts indicating moving people with high fevers.

**FeverCheck**
Stationary access control with temperature screening and facial recognition.
FeverCam and FeverCheck

✓ Medically Accurate Temperature Testing
✓ Real-Time Alerting
✓ Secure Cloud Service

FeverCam is the most sophisticated online, multiple camera system on the market today.

- UK-developed
- ISO27001-certified
- Cloud-based dashboard

Benefits

- Manage people entering the premises without the need for direct human contact
- Protect your staff and environment
- Enhance your corporate social responsibility
- Ensure safety at work
How it Works

1. Provides real-time, medically accurate temperature readings in both low- and high-flow rate areas, such as receptions, airports and stadiums.

2. Alerts appropriate staff when a high temperature has been detected in an individual.

3. Integrates with the building’s management, access control system and corporate applications.
On-the-move and static detection with real-time alerting, facial recognition and access control.
High Temp Check

Use Case

Monitoring & Alerting

Monitoring Process (Customisable)

Web Portal (eg. reception)

Gate Integration

Notify User (smartphone)
